Description:

With its numerous LED strips, Eurolite offers light on tape for technical decoration or bar illumination.

The flexible LED strips have a length of 5 meters. Unichrome versions - red, blue, green, yellow, cool white, warm white - are complimented by two RGB versions. The single colors can be ordered either with a wide span (150 LEDs) or with a short span (300 LEDs) between the LEDs. The RGB versions are available in 12 V or 24 operation - LED quantities are 150 or 240. An optional LED controller controls the brightness and the speed of the RGB LEDs or provides automatic run of the built-in color programs.

Supplied on a plastic reel, the LED stripes feature a self adhesive rear side for simple installation. Color and form can be used as desired as the strips are very flexible and adaptable to really every venue.

Think about the enormous power of LEDs and you can easily imagine, how effective 300 diodes are, when they are evenly spread over five metres. The first-quality LED ribbons are available in green, blue, yellow and white. When they are used for eight hours a day, their durability is about an unbelievable 33 years in average. Of all the advantages of the LED technology, this is the most impressive.
