Description:

Ivy is one of the most popular plants for adding a sense of natural beauty, fullness, and vitality to decorative arrangements. With the artificial Ivy (FIRESILX), planters, decorative displays, and greenery concepts can be enhanced in no time with attractive green accents.

The detailed leaves and naturally cascading vines create an authentic appearance and bring a harmonious sense of lightness to any arrangement.

With a length of 56 cm, this trailing plant is ideal for planters, shelving units, counters, room dividers, and decorative containers. When combined with other greenery, it creates varied compositions that give spaces a polished and welcoming appearance. The individual vines are attached to a practical insertion stem, allowing for quick and easy placement. Once inserted, the vines simply need to be shaped by hand to create a customized arrangement with a natural look. This makes it easy to create attractive greenery displays that provide lasting freshness and visual appeal.

Thanks to its flame-retardant B1 construction, the ivy is also suitable for environments with special fire safety requirements. In hotels, restaurants, public facilities, trade show installations, and prestigious commercial spaces, creative greenery concepts can be implemented even where specific fire safety regulations must be observed.

Caractéristiques:

- B1 difficilement inflammable; Class B, s2, d0 low flammability
- Correspond DIN 4102-1 et EN 13501-1
- L'article est livré avec prêt à poser
- Adapté à des espaces protégés en extérieur
- Pour des domaines d'application tels que: Décoration

Logistique

EAN / GTIN: 5055183990384
