

# Triggers by hyperlinks

The software enables to simulate the "Key Press" triggers (A-Z + 0-9 + F1-F12) by running short scripts. These scripts can be created easily from the software (see Menu Help/Shortcuts => "Generate shortcuts").

It will create a "Shortcuts" folder containing one file per key available. Each file is named following the corresponding key (A.vbs for "A" key, B.vps for "B" key, ...).

Then if you need to trigger any action in the software from an hyperlink (from Microsoft Powerpoint for example), you just have to target the corresponding file in the Shortcuts folder.
